DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-5, 8-11 and 14-18, drawn to subject matter wherein the data processing for static presentation is performed to correct, enhance, restore, or otherwise control a visual attribute, of an image reproduced for static presentation, such as color, contrast, resolution, or density (attribute control), classified in class 358, subclass 1.9.
 - II. Claims 6-7, 12-13 and 19-20, drawn to subject matter for deriving a signal obtained from a black color of high density in a printout image (black signal synthesis), classified in class 358, subclass 529.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility as a system that improves color reproducibility of printed matter produced by a printing press in proof print produced by a proof press using a look-up table, while invention II has separate utility such as a system that corrects proof printing where each of the levels of monochromatic color gradation of black is on the proof print. See MPEP § 806.05(d).

Art Unit: 2626

3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
